

Entrepreneurial Women in Renewables

'A smart, decentralised system'

16 November 2017, TLT London

Agenda

This event will provide an opportunity for women working in the sector to build stronger relationships and to understand the market opportunities as we move towards a system which is more decentralised, smarter and cleaner.

An energy system characterised by higher levels of renewable energy and decentralised generation is creating huge opportunities for increased use of energy storage, smart energy applications and new business models based on localised energy markets and supply balancing.

16.00 **Registration, tea and coffee on arrival**

16.30 **Welcome and introductions**
