

SOLAR THERMAL

Creator

* UNCOMMON

Solar thermal basks in the sunlight, using solar energy to warm up water for home use. It needs the sun to work, so isn't so good on cloudy days, but it can provide nice warm showers when the sun shines.

EMISSIONS

POWERS: Free energy from an entirely renewable source.

COMBO MOVES: *Heat Storage* - A great way to heat water in a water tank.

WEAKNESSES: A good team player, but not strong enough on its own. Another source of heat is usually needed.
